Importance: High

Sabrina - let me know if I can help with something. FYI - Dan Wall is setting up a meeting @ 11:00 AM today with Steve Way and myself on some data that he has just received as part of the risk assessment that is underway. He felt it was important and significant enough to schedule this meeting. Let me know if you want to come - Dan is getting a room in the conference center.

I haven't seen a control for responding to the letter but that doesn't mean it's not in the works.

All, I just received a call from Doug Jamison, CDPHE, asking for a summary of the pre-listing activities and timing to help the state respond to this letter that Rob Robinson sent to our RA and the CDPHE's Exec. Director.

I will put something together, but wanted to let you know I called Doug back to see if CDPHE is already coordinating with EPA on the response. Doug will speak with Monica about coordinating with Bill about since we may already be in the midst of a Controlled Correspondence ourselves.

Sabrina

Dear Stakeholders. Thought this would be of interest.

Peter Butler  
970-259-0986

Dear Sir/Madam:

The attached file has a letter addressed to Dr. Larry Wolk, Executive Director and Chief Medical Officer, concerning contamination of the Animas River, San Juan County, Colorado. The letter summarizes the water contamination issues, and includes a petition and references. The petition calls on CDPHE to take more aggressive action in restoring the Animas River to healthy conditions.

Toxic discharges from mines in the Upper Animas Mining District cause water concentrations of pollutants to exceed standards in the upper Animas River.

Some mine remediation has occurred in the last two decades; however, the mine effluents continue to seriously impact aquatic life.

CDPHE is, of course, the responsible State agency. We would appreciate learning about CDPHE plans to remedy the Animas River contamination, and learning how we might assist.

Sincerely,  
Robert H. Robinson
